Propellers are easy to find on banggood

ESC's are also ez

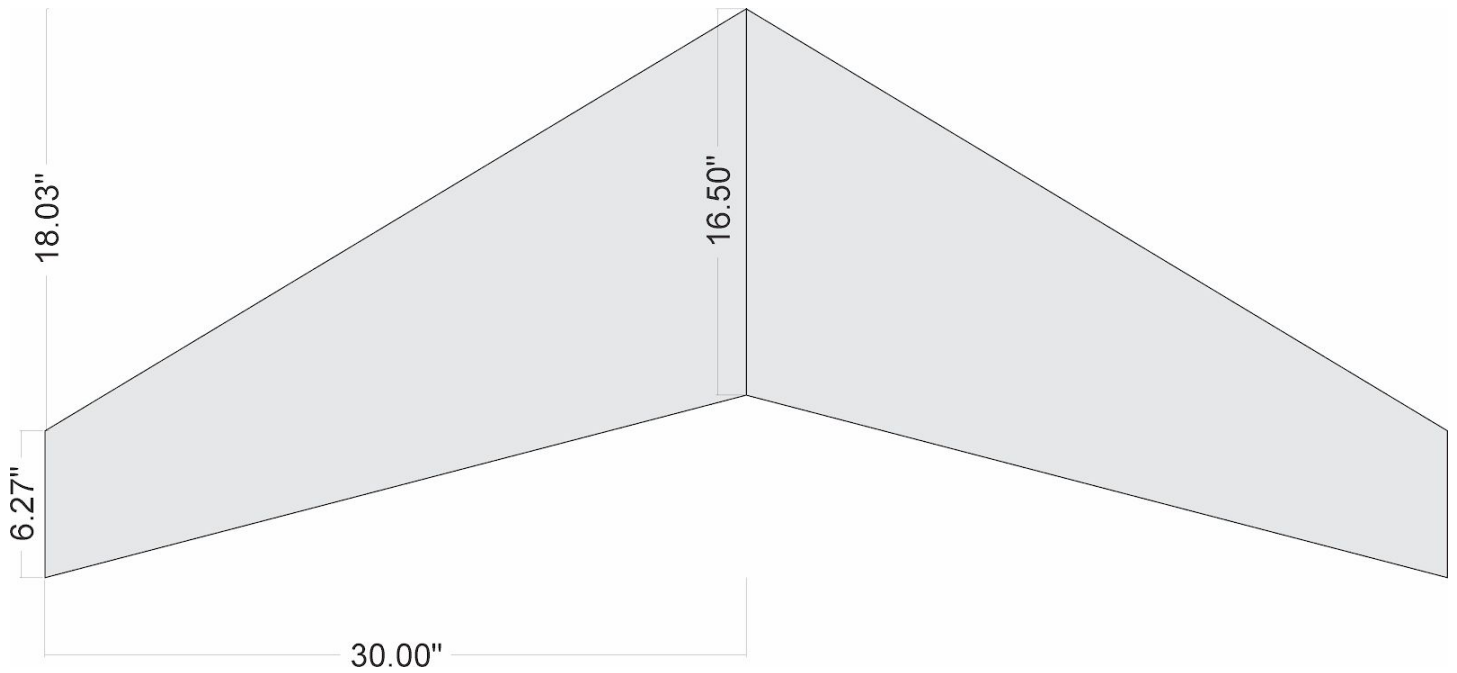

Just ditch fpv completely so no vtx, no vrx, and no cam

Control reciever and transmitter - aadit

Flight controller -

PDB

For my current plane, go full on for 2 motors and make differentials, and use a hot knife to cut thermocol and use that with a carbon spar.

I am making a flying wing and I have all the specifications for it, and I need to get it cut by a hot wire because I cannot replicate the airfoil by hand. I want to use EPP and a carbon rod (spar). The root chord is 16.5 inches (41.91 cm), the tip chord is 6.27 inches (15.92 cm), the sweep is 31 degrees, and a twist of -3 degrees. The root airfoil is HS 522, and the tip airfoil is MH60.

SOLAR PANELS??
